### Activation Notification: Montana State Reference Network - Pilot Program

[www.mtsrn.org](http://www.mtsrn.org)

The Montana State Reference Network (MTSRN) now has several **activated** Real Time Networks (RTNs) that are providing real-time services and data files for post-processing with additional networks coming online in the first half of 2019. The MTSRN is a pilot, a test RTN *operated as a cooperative effort of public and private partners that includes 30+ reference stations feeding raw observation data to the Washington State Reference Network (WSRN), the cooperative RTN in Washington State that is hosting the pilot under an interstate cooperation agreement. The RTN is available to not only surveyors using Carlson, CHC, Leica, Sokkia, Topcon, and Trimble GPS units but agriculture and construction working with Case, John Deere, Massey Ferguson, New Holland, and Caterpillar equipment.*

If you have questions regarding this exciting resource, be sure to attend the 2019 MARLS Conference. There will be an RTN presentation given by Gavin Schrock followed by a Round-Table discussion.

Additional information about MTSRN can be found at [www.mtsrn.org](http://www.mtsrn.org) or by contacting your local GPS dealer. RDO and Trimble contacts are shown below:
